coinbird.eth Tokenomics

An overview of the coinbird.eth ($BIRD) tokenomics.

Introductory information

- Name: coinbird.eth

- Symbol: $BIRD

- Decimals: 18

- 7.770.000 $BIRD tokens were minted upon deployment.

- No tokens were preallocated to **anyone**. 100% fair and stealth launch.

- 3% Tax to buy coinbird.eth. Can **not** be modified.

- 3% Tax to sell coinbird.eth. Can **not** be modified.

Transactions & transfers

- No more than 1% of the total supply can be transfered in one go or owned per wallet.

- 1% of the total supply currently equals **77.700** $BIRD tokens.

- On every trade:

- 97% of the tokens are transfered to the recipient.

- 1% of the tokens are transfered to the **coinbird wallet**.

- Coinbird wallet address: 0x7Ebc4f736971D8789A312d75600dD39b761C5367

- 1% of the tokens are transfered to the **plushy wallet**.

- Plushy wallet address: 0x2F44684bA039Fa66C6eAf1F2eD1C8ea1FcC0D952

coinbird.eth Tokenomics

- 0.5% of the tokens are transfered to the **firebird contract**.

- Firebird contract address: 0xB9a82fCad8BCD198701eFAa70af1BE7B6DCC6B3F

- 0.5% of the tokens are rerouted to the **coinbird.eth** contract and liquidated.

- Coinbird.eth contract address: 0x6B29EA99096c191155972f99f822c10AB995747D

Wallet limitation

- uniswapV2Pair is the only address that can own up to 100% of the total supply.

- The plushy wallet can own up to 2% of the total supply.

- The coinbird wallet can own up to 2% of the total supply.

- Addresses without a "wallet limitation" can own up to 4% of the total supply.

- Only the coinbird can exclude addresses from the "wallet limitation".

- The following addresses have been excluded from the "wallet limitation":

> no address has been excluded from the "wallet limitation" yet

- Addresses excluded from the wallet limitation can **not** be reincluded.

Taxation

- uniswapV2Pair is the only address that can **not** be excluded from taxation.

- Only the coinbird can exclude addresses from taxation.

- The following addresses have been excluded from taxation:

> the coinbird wallet in order to provide liquidity without preallocation

- Addresses excluded from taxation can **not** be reincluded.

coinbird.eth Tokenomics

Fund management

● Funds gathered in the **plushy wallet** are primarily used for the following tasks:

● Branding, marketing, covering the listing fee of exchanges, cooperations, promotions.

● Funds gathered in the **coinbird wallet** are primarily used for the following tasks:

● Salaries of anyone involved in the (further) development of the coinbird project and the advancement of the RA8-X7 AI, costs of contracting 3D specialists, gaming studios as well as blockchain experts.

Firebird

● Firebird is a co-evolved contract in the coinbird.eth architecture.

● It absorbs 0.5% of the tokens transfered in each taxed transaction.

● Once the tokens accumulated in the firebird surpass 1% of the total supply, they get burned.

● This effectively reduces the total supply and increases the value of each token.

● The firebird can not actively transfer tokens to another address.
